Refractory Lined Transfer Pipes

- The Metacast Aluminum Pumping Systems are equipped with refractory lined transfer tubes
- Our transfer tubes are designed to maintain metal temperature during the transfer cycle
- Heating elements can be added for longer run and small pour weights where freezing is likely to occur
- Lined pipes can be made up to 3 meters long
- Liners are made from low thermal mass insulated castable

Lined Transfer Pipe Shapes

We have the ability to cast refractory lining in many shapes
Ask us if your requirement is included in our capabilities
